1st Test of the Hamoni® Harmonizer by a medical practitioner NLS-Diagnostics shows high efficacy - device is literally called "a miracle"

The following results made us speechless when we were notified for the first time: Medical practitioner Lothar Kappes from 38518 Gifhorn (Lower Saxony, Germany) had come across our website by accident and had offered to test the Harmonizer on his patients free of charge. After a couple of weeks he sent us the test results and literally described the Harmonizer as a "miracle". Mr. Kappes provided us the examination results of a male and female patient for their cerebral cortex, stomach and lung.

In cases where even the use of up to 40 different substances normally only achieves an average improvement between 20% and 35%, the Hamoni® Harmonizer showed an energetic improvement in organs of approx. 80%!

Dear Mr. Fennesz,

Here is a representative cross-section of two patients, the measurements are attached as graphics. At the moment we are mainly testing with Metascan, if the Harmonizer yields improvements. The actual tests are done without the Harmonizer in the first run, so to speak the initial measurement.

Then we test a range of appropriate homeopathic remedies and Bach flowers as well as other medication to balance the patient. We have excellent reproducible data with Metascan, which shows very reliably the patient's bioenergetic and physical condition. It is not unusual that the first 10 remedies we try do not cause any improvement at all when we measure the patient after treatment.

Find attached the data of 2 patients, where we have been able to achieve EXTREME IMPROVEMENTS through the use of the Harmonizer, such that one can simply be astonished. As a rule, we achieve an average improvement of 20%-35% after testing between 1 and 40 different remedies.

Improvements in the range of 80% as is seen after application of the Harmonizer are extremely rare when testing medication and only in a very few patients a year we can experience this miracle. With your device we have now achieved this miracle several times in only 3 weeks (see measurement data of patients in the annex). We now believe that the Harmonizer is a very useful tool to stabilize patients' health.

I would like to emphasize once again that the measurements with Metascan are extremely well correlated with physical well-being and that we are very confident about the extent to which improvements have been made subjectively and also via control measurements. We would be very pleased if we were able to deliver the Harmonizer directly to patients in our practice, so that they can install it as soon as possible.

Best regards,

Your medical practitioner Lothar Kappes

How does the NLS diagnostic method work?

NLS is an abbreviation for Non-linear System Diagnostics. In contrast to the well-known "old" diagnostic methods X-ray and magnetic resonance tomography, this method is relatively young. Its development was initiated in the early 1990s by S.P. Nesterov, a member of the Russian Academy of Sciences. Originally the technology was used for the diagnosis of health conditions of astronauts on the space station MIR. It was clinically tested during the 1990s and since the year 2000 it is used worldwide in diagnostic medical practice.

The body is irradiated with electromagnetic frequencies between 1.4 and 4.9 GHz. A sensor measures the reflections, so to speak the response of our body. The reflection pattern is then compared with a database of currently 12 million patients suffering from various diseases of different severity. This comparison makes it possible to determine the severity of illnesses and progress of changes in body tissue, up to a resolution of 0.03 mm.

Let us assume, for example, that a patient suffers from a thyroid disorder that has

S.P. Nesterov, inventor of the NLS diagnostic method

not yet been diagnosed. The NLS device recognizes that the patient's reflection pattern looks very similar to the stored patterns of other patients with thyroid disorders by comparing the patient's pattern with the millions of data sets from already examined patients. Since it has stored records of many patients with different severity of thyroid disorder, it can also indicate the severity of the disease. If steps are then taken to treat the disease and the patient's body is measured again with the NLS device, an indication of how successful the therapy was, can be given. The degree of success is termed "energetic improvement" and quantified as a percentage figure. This number makes it possible to compare the success of different therapies.

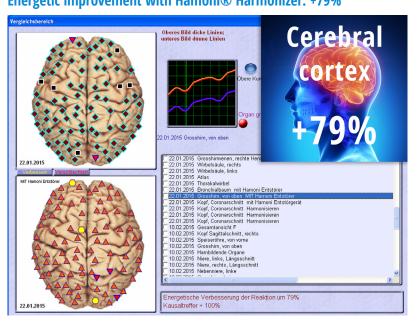

In particular, Mr Kappes compared the improvement achieved by the application of the Harmonizer with improvements achieved by other therapies he

regularly uses. While the latter usually yield an improvement between 20% and 35%, the improvement figures by using the Harmonizer were 80% and above.

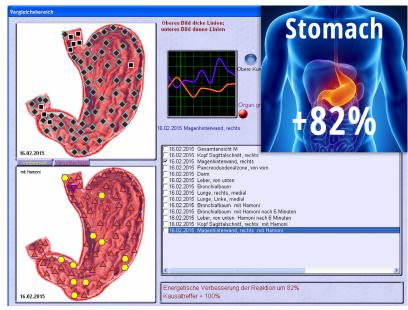

From the measured data points, the NLS device can also create a picture of the organ and display local improvements. You will see four such pictures on the following pages which were created during the test of two patients by Mr. Kappes. NLS systems are produced by various manufacturers and marketed worldwide with various brand names. The "Metascan" device mentioned in the report is one of these NLS systems.

We have asked several general practitioners in Germany about their opinion on NLS diagnostics. Their unanimous feedback was that in their own practical experience NLS is a very accurate and useful technique for medical diagnosis.

Cerebral cortex: Energetic improvement with Hamoni® Harmonizer: +79%

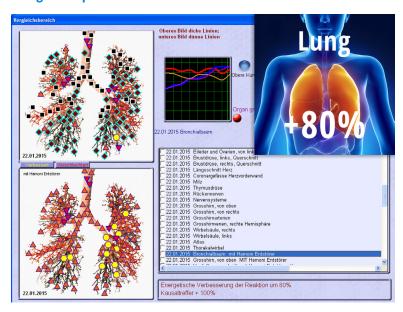

Male patient "Reinhard", Stomach: Energetic improvement with Hamoni® Harmonizer: +82%

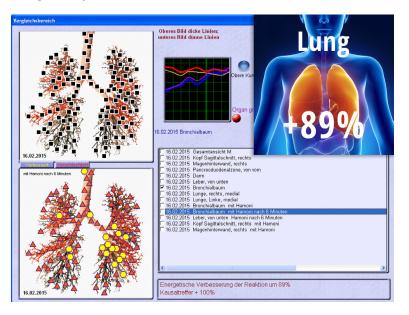

Hamoni® Harmonizer Hamoni Harmonizer 39

Female patient "Susanne", Lung: Energetic improvement with Hamoni® Harmonizer: +80%

Male patient "Reinhard", Lung: Energetic improvement with Hamoni® Harmonizer: +89%

2nd Test of the Hamoni® Harmonizer by a medical practitioner Measurements of medical practitioner Stefan Mattausch, Nuremberg, Bavaria

Our first contact with medical practitioner Stefan Mattausch was in May 2015. At the time, he tested the Hamoni® Harmonizer for the first time using non-linear system diagnostics (NLS, device used was *Deltascan Platinum*). The results were so convincing to him that he began to recommend the Harmonizer to his patients and other medical practitioners. He is doing this completely free of charge, just as he performed the original test without any payment. We want to share his measurement results and experience with the Harmonizer. After a first short test of the device had apparently yielded very good results, we received this email from Mr. Mattausch on 12.5.2015:

Dear Mr. Fennesz,

Since I feel very well with my new "roommate" (the Harmonizer), I just bought three more Harmonizers (2 for me privately and another for tests in my practice). In the next few days I will add your company to the recommendations on my homepage:-)

Many Greetings from Nuremberg! Stefan Mattausch

Mr. Mattausch had given the harmonizer to a 49-year-old, male patient on 9.5.2015 to use in his home. The patient put the device about 4m away from his bed. On the same day, a reference measurement was carried out in Mr. Mattausch's practice which established the actual condition of the patient prior to the application of the harmonizer. A new measurement was then carried out on 16.5.2015, i.e. after one week of use of the device. From the comparison with the reference measurement one could thus conclude, which changes in the body of the patient had been caused by using the Harmonizer.

Results of the measurements

The results are depicted on the following pages. Our remarks:

- Clear improvements can be seen in the blood cells and important organs.
- Very interesting is the improvement of 49% in the pituitary gland. As you will learn in our chapter on electromagnetic pollution (EMP), the pituitary gland is one of the most important parts in our brain that are disturbed by EMP. Other areas are the pineal gland (also see the feedback by neuropsychiatrist M.D. Mr. H.R.) and the blood-brain barrier.
- Another interesting result is the energetic improvement in the adrenal gland by 20%. The adrenal gland, like the pituitary gland, plays a central role in the stress system of our body. This is exactly where our stress hormones cortisol and adrenaline are produced. And as we will see, stress is the primary reaction of our body to electromagnetic pollution.
